# Complex Systems and Complex Networks

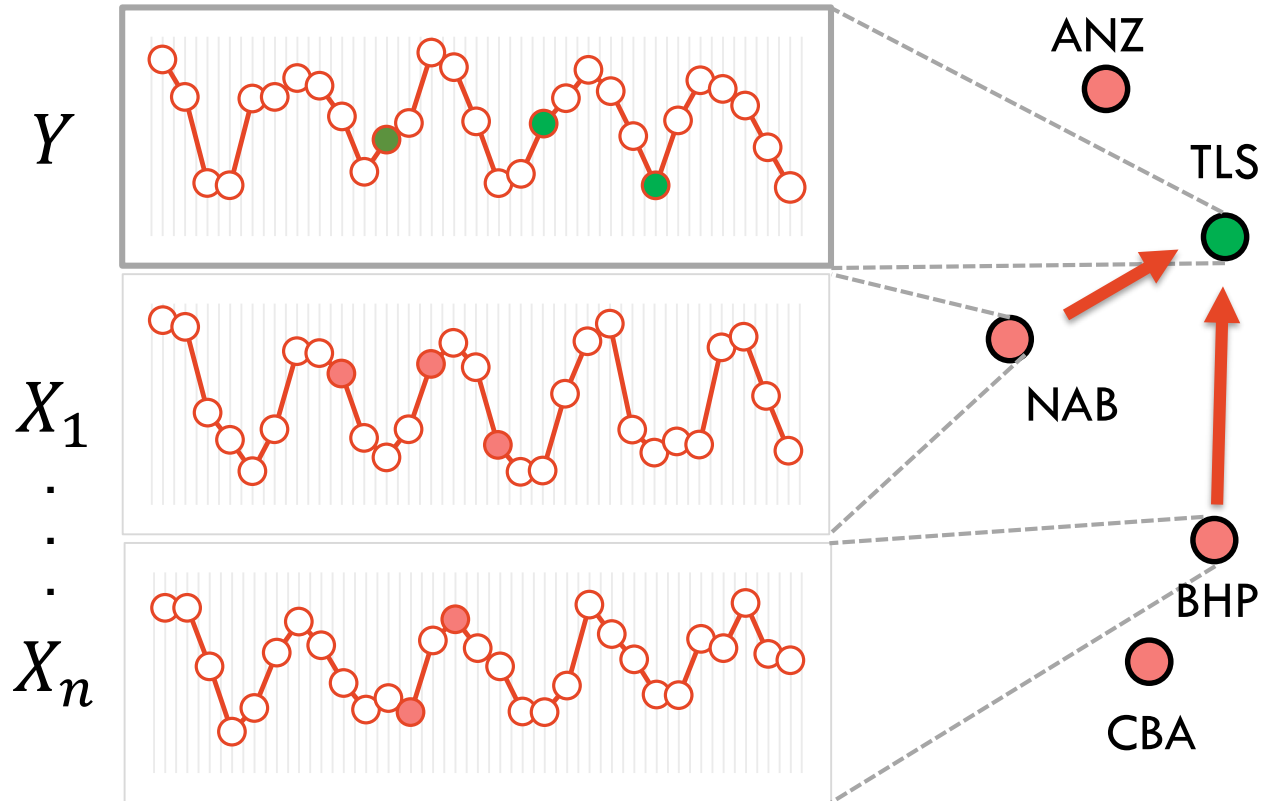

# Modelling neuronal networks

# Algorithm and Transfer Entropy

# Applications beyond neuroscience

# Python code freely available on GitHub!

```
# Import classes
from idtxl.multivariate_te import MultivariateTE
from idtxl.data import Data

# Generate test data
data = Data()
data.generate_var_data(n_samples=1000, n_replications=5)

# Initialise analysis object and define settings
network_analysis = MultivariateTE()
settings = {'cmi_estimator': 'JidtKraskovCMI', 'max_lag_sources': 5}

# Run analysis
results = network_analysis.analyse_network(settings=settings, data=data)
```
